EDUCATION

Depaul University

Software Development / Bachelor of Science

GPA: 4.0

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming (OOP), Database Management Systems, Web Development, Computer Systems II

Clubs: Computer Society

08/2020 – 06/2025
Chicago, United States

SKILLS

- Coding: C#, C, C++, Python, Java, Visual Basic; MySQL, HTML, Javascript, React, Vue.js, Flask
- Tools: Docker, MySQL, Github, AWS, MongoDB, Pandas, NumPy, Tableau

INTERNSHIP EXPERIENCE

Automation Analyst Intern

CCC Intelligent Solutions

- Collaborated in a software engineering team to engineer custom Kanban solution with React, integrating Jira and Salesforce APIs. Developed reusable component library and implemented robust testing harness with Jest and React Testing Library. Increased team productivity 30%.
- Led development of custom automation platform with Python to streamline IT system administration tasks including user/permissions management and cloud infrastructure provisioning. Architected microservice-based architecture and CI/CD pipelines improving developer velocity.
- Contributed to central microservices codebase using Python, MongoDB, PostgreSQL enabling automated AD user data collection and governance. Optimized CRUD operations achieving 50% performance gains for backend processes.
- Worked jointly with Infrastructure team to architect infrastructure-as-code solution on AWS cloud using MongoDB. Designed modular scripts for security compliance and rapid scaling. Conducted load testing to ensure system stability at high traffic volumes.

09/2022 – 05/2023
Chicago, United States

Data Science Intern

Data Glacier

- Collaborated with data science team to develop Python-based analytics platform empowering venture capital investment decisions. Uncovered actionable insights for firm's mobility investment thesis through exploratory analysis of market datasets.
- Led engineering team to build YouTube comment spam detection microservice with Flask and scikit-learn. Designed and developed custom LSTM deep learning model, exposed for prediction through a REST API.
- Worked jointly with backend engineers to architect big data pipeline solution using Dask and Modin modules. Implemented distributed multiprocessing for high efficiency ETL and data preparation, optimizing performance up to 2x.

05/2022 – 09/2022
Chicago, United States

PROJECTS

Task Management

Web App

- Designed and built intuitive drag-and-drop task management web application with React and Chakra UI for agile task tracking. Integrated stopwatch timer on cards with auto-save to local storage for time tracking.
- Developed mobile-first responsive UI with swipe navigation and light/dark theming. Leveraged React Context API for global state management.
- **Coding and Frameworks:** React, Chakra UI, HTML/CSS, JavaScript ES6, Local Storage API

04/2023 – 05/2023

Tech E-commerce Shop

Web App

- Engineered an interactive real-time shopping cart management system using React state hooks and context APIs.
- Developed fluid and responsive user flows for cart editing including adding/removing items, applying promotions and discounts, and dynamically recalculating totals on the fly.
- **Coding and Frameworks:** React, React Context API, HTML/CSS, JavaScript ES6

01/2023 – 02/2023
