EDUCATION

Depaul University

Software Development / Bachelor of Science

GPA: 4.0

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming (OOP), Database Management Systems, Web Development, Computer Systems II

Clubs: Computer Society

08/2020 – 06/2025
Chicago, United States

SKILLS

- Coding: C#, C, C++, Python, Java, Visual Basic; MySQL, HTML, Javascript, React, Vue.js, Flask
- Tools: Docker, MySQL, Github, AWS, MongoDB, Pandas, NumPy, Tableau

INTERNSHIP EXPERIENCE

Software Engineer Intern

CCC Intelligent Solutions

- Engineered a reusable component library for Salesforce APIs and implemented a Kanban board using HTML, JavaScript, Angular, CSS, and React frameworks. This initiative streamlined work progress tracking, resulting in a 30% increase in team productivity.
- Led the creation of a Python-based custom automation platform, enhancing IT system administration tasks and improving developer velocity through a microservice-based architecture and CI/CD pipelines.
- Contributed to the central microservices codebase using Python, MongoDB, PostgreSQL, enabling automated AD user data collection and governance; achieved a 50% performance gain in backend processes through CRUD operations optimization.
- Collaborated with the Infrastructure team to architect an AWS-based infrastructure-as-code solution using MongoDB, designed modular scripts for security compliance and rapid scaling, and ensured system stability at high traffic volumes through load testing.

09/2022 – 05/2023
Chicago, United States

Data Science Intern

Data Glacier

- Collaborated with the data science team to develop a Python-based analytics platform for driving venture capital investment decisions.
- Led an engineering team to build a YouTube comment spam detection microservice using Flask and scikit-learn. This involved designing and developing a custom LSTM deep learning model and exposing it for predictions through a REST API, thereby significantly improving the system's ability to detect and filter spam.
- Worked in partnership with backend engineers to architect a big data pipeline solution using Dask and Modin modules. The implementation of distributed multiprocessing for high-efficiency ETL and data preparation led to an optimization of performance up to 2x, allowing for faster data processing and more timely analytics.

2022 – 09/2022
Chicago, United States

PROJECTS

Task Management

Web App

- Designed and built intuitive drag-and-drop task management web application with React and Chakra UI for agile task tracking. Integrated stopwatch timer on cards with auto-save to local storage for time tracking.
- Developed mobile-first responsive UI with swipe navigation and light/dark theming. Leveraged React Context API for global state management.
- **Coding and Frameworks:** React, Chakra UI, HTML/CSS, JavaScript ES6, Local Storage API

04/2023 – 05/2023

Tech E-commerce Shop

Web App

- Engineered an interactive real-time shopping cart management system using React state hooks and context APIs.
- Developed fluid and responsive user flows for cart editing including adding/removing items, applying promotions and discounts, and dynamically recalculating totals on the fly.
- **Coding and Frameworks:** React, React Context API, HTML/CSS, JavaScript ES6

01/2023 – 02/2023
